SCHEDULE MEETING

A decade of professional football analysis, a lifetime of passion for football.

I am a certified football analyst, specialized in data analysis, scouting and sports management, with +10 years of experience and continuous learning in this field. I am familiar with all the main data providers, platforms, specific tools and software used for football analysis.

My main hard skill is the creation of interactive dashboards and reports for multiple football-related purposes, [as you can see on my website](#), also standing out in the combination of objective and subjective football analysis & scouting. I like both the numbers and the game itself.

My main soft skill is analytical thinking, which helps me solve problems and transform ideas into reality. I generate an immediate impact on the organizations and professionals I work with. I am also a teacher (MSc in Scouting & Big Data, by Sevilla FC) and conference speaker.
