SCHEDULE MEETING

More than a decade of professional football analysis, a lifetime of passion for football.

I am a certified football analyst, specialized in data analysis, scouting and sports management, with +10 years of experience and continuous learning in this field. I am familiar with all the data providers, platforms, specific tools and software used for football analysis.

My main hard skill is the creation of interactive dashboards and reports for multiple football-related purposes, [as you can see on my website](#), also standing out in the combination of objective and subjective football analysis & scouting. I like both the numbers and the game itself.

My main soft skill is analytical thinking, which helps me solve problems and transform ideas into reality. I generate an immediate impact on the organizations and professionals I work with. I am also a teacher (MSc in Scouting & Big Data, by Sevilla FC) and conference speaker.
